

# wiserganic INCREASES BLUEBERRY PRODUCTION

In test after test, WISerganic liquid organic fertilizer is proven to dramatically increase crop yields, including blueberry production. WISerganic is created using a patented process to produce a predictable, clean product that feeds the soil beyond the limited NPK of traditional fertilizers.

- Contains full spectrum of macro and micro nutrients.
- Filtered to at least 50 µm, WISerganic reduces labor costs when applied using existing irrigation systems.
- Pathogen-free, WISerganic eliminates food safety concerns.
- WISerganic can be applied throughout the growing cycle—there is a 0 day pre-harvest interval.

## How Other Fertilizer Options Stack Up Against WISerganic

- Compost and manure are heavy and expensive to transport.
- Fish-based fertilizer is unpredictable as a resource and too odorous for use in enclosed spaces.
- Other liquid fertilizers are not as clean and are problematic, often clogging drip lines when used in irrigation systems.
- Synthetic fertilizers fail to feed and rebuild the soil.

## Proven Results in Blueberry Trials Using WISerganic Fertilizer

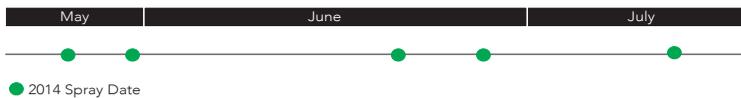

FIGURE 1: FERTILIZER EFFECTS ON YIELD

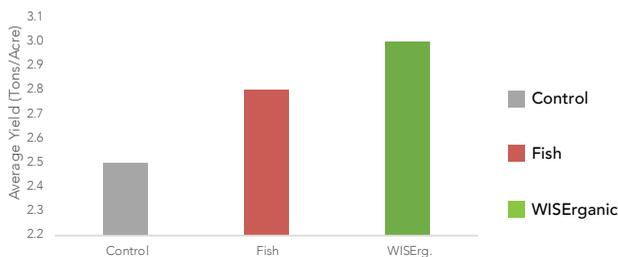

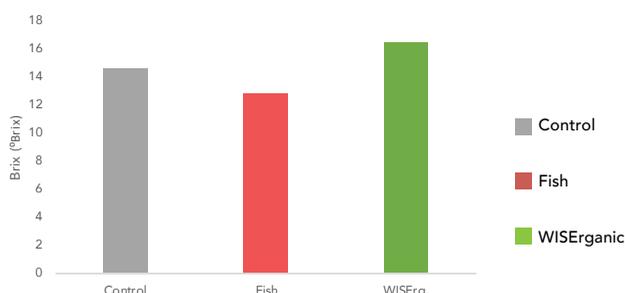

FIGURE 2: FERTILIZER EFFECTS ON BERRY BRUX

- The study block treated with WISerganic had the highest blueberry yield.
- Berry brix at harvest was distinctly greater when WISerganic was applied.

A study was designed to determine the effects of liquid organic fertilizer on blueberry production systems in Washington. Two organic fertilizer treatments were compared on blocks of established 'Duke' highbush blueberries. The two fertilizers trialed were a fish fertilizer and WISerganic. Fertilizers were applied at equivalent nitrogen loading rates of 10 lbs per acre. Applications were split across five dates from May to July. There was also an untreated control block for comparison.

Results showed that when WISerganic was applied, blueberry yield per acre was greater than when compared to the same nitrogen loading rate of fish fertilizer and an untreated control. Additionally, the study found that WISerganic fertilizer greatly improved berry brix at harvest relative to that observed in the fish fertilizer treatment.

At WISerg, food safety is our number one concern. WISerganic fertilizer is independently verified to be free of pathogens and other food safety risks. Our food safety technologies allow for full traceability from grocery store to grower.
